# TSOP MD-500 SERIES

**State of the Art Equipment**

## State of the Art Equipment

Tyler Technologies, in collaboration with a number of law enforcement agencies, has developed the Tyler Special Operations Platform (TSOP) for rapid S.W.A.T. insertion / extraction, dive team transport & emergency evacuation response. The TSOP is designed to make these and other helicopter missions easier, safer and more efficient.

## Tactical Advantage

Similar in concept to equipment that is currently employed in U.S. Army Special Operations, the system consists of an externally mounted cargo platform. In the post 9/11 era, this equipment is expanding the counter-terrorism capabilities of law enforcement agencies worldwide.

## Rapid Installation

Installation is user-friendly and requires no modification to the airframe. The TSOP is designed to mount to the helicopter's aft cabin area and fuselage jack points with unique clamps & brackets. It takes less than 5 minutes to install the cargo platforms, no tools required, ideal for emergency response.

## Design Features

Each platform is integrated with an ergonomic folding footrest & attachment points for securing personnel wearing a safety harness. Optional equipment includes self-retracting twist release seat belts specially designed for the TSOP. Also available are quick litter mounting brackets.
